Career passport design discussion

Invited [Soutik Mukherji](#) [Sumeet Shisodia](#) saras@careerpassport.ai [Aishvarya D](#)

Attachments [Career passport design discussion](#)

Meeting records [Transcript](#)

Summary

The session introduced the project scope and product features, resulting in a wireframe-first design strategy for development.

Establishing Project Design Goals

The team adopted a wireframe-first design methodology to ensure user experience coherence before developing final interfaces. This strategy focuses on integrating disjointed modules into a unified hiring system.

Developing Assessment Journey Modules

The product model utilizes Artificial Intelligence to generate 6 assessment trips and inference cards for candidates. These features bridge critical communication gaps between hiring managers and recruiters.

Refinement and Professional Standards

The group focused on maintaining consistent professional standards for all product documentation and video deliverables. This ensures alignment with the expectations set by technical leadership.

Decisions

Aligned

- **Design process workflow established** The design workflow is established to prioritize locking wireframes before proceeding to the UI development phase.
- **Primary project workstreams identified** The project scope is set to focus on the job posting flow and the candidate trip design flow.
- **Design system development timeline** The design system development is set to be prioritized and frozen early in the project to ensure visual consistency.

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

Next steps

[Soutik Mukherji, Aishvarya D] Create Wireframes: Develop wireframes for the core hiring modules identified as the immediate priorities.

[Soutik Mukherji, Aishvarya D] Schedule Timeline: Establish a project timeline outlining the delivery dates for the design phases.

[Saras Satyam] Share Document: Share the document detailing the conversation to closure flow.

[Saras Satyam] Provide Documentation: Provide documentation detailing the backend and frontend components for the job posting and trip design flows.

[Saras Satyam] Share Concept Note: Distribute the broad concept note covering candidate, recruiter, and company views for the website build.

[Sumeet Shisodia] Provide Data Template: Provide a data structure template for candidate information including the preferred word count for responses.

[Sumeet Shisodia] Create WhatsApp Group: Create a WhatsApp group for the project team to facilitate communication and file sharing.

[Sumeet Shisodia] Create Wireframes: Develop wireframes for the job application and trip artifact flows for review.

[The group] Freeze Design System: Freeze the design system including color combinations and style references before moving to the UI development phase.

[Nishan, The group] Collect Design References: Gather and share design references from modern AI software companies to inform the platform interface.

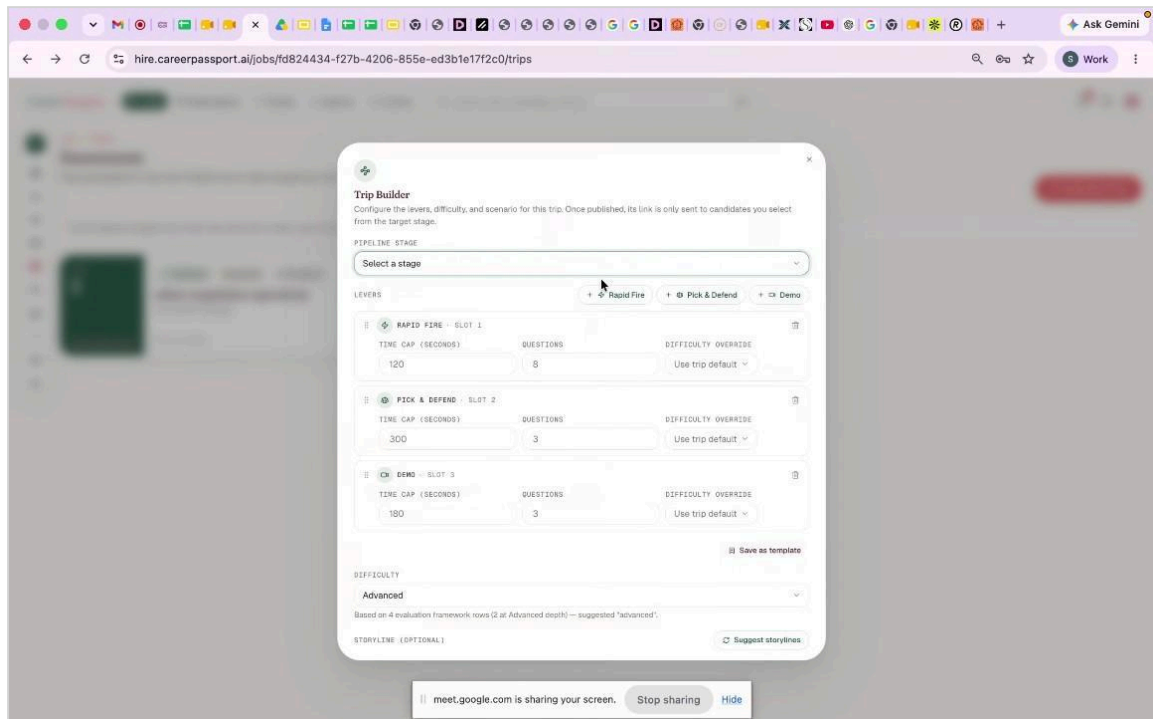

[Sumeet Shisodia] Provide Project Timeline: Provide a rough project timeline for the development work.

Details

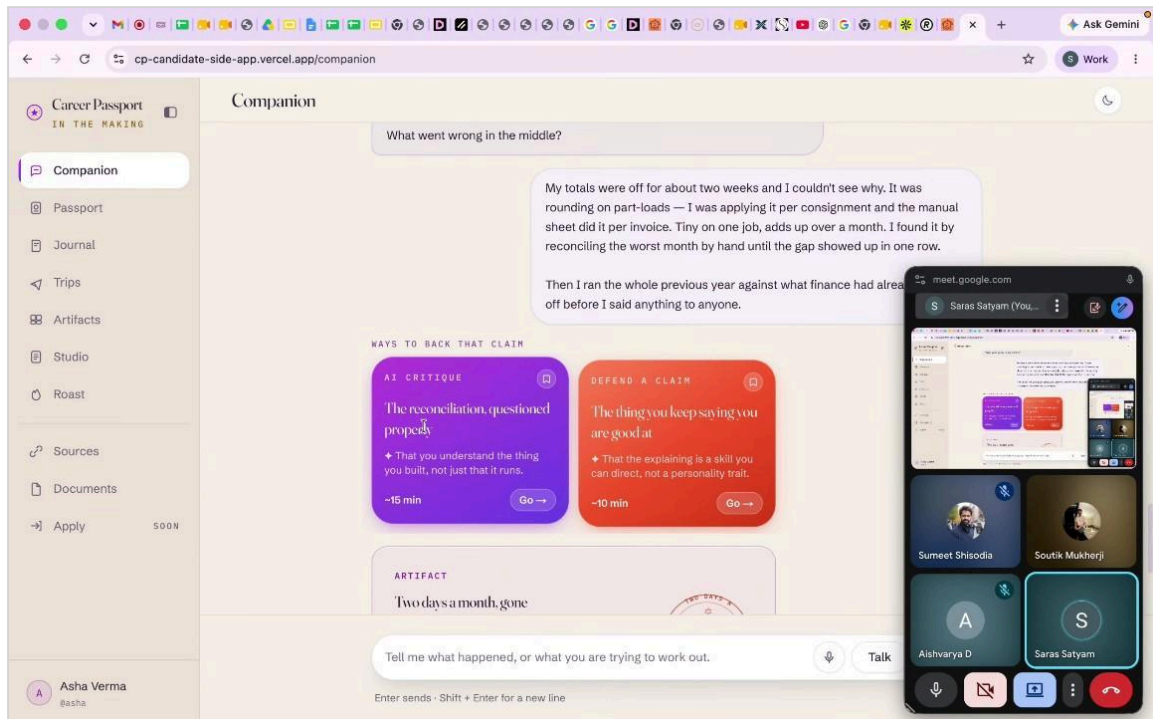

Did the screenshots in this section make your notes [better](#) or [worse](#)?

- **Project Goals and Team Introductions:** Sumeet Shisodia introduced Soutik Mukherji and Aishvarya D as the designers leading the project for Career Passport ([00:00:59](#)). The team's primary goal is to identify core business modules, develop wireframes for a strong user experience, and establish a timeline for project deliverables. Sumeet Shisodia emphasized a "wireframe-first" approach, moving to UI design only after the user experience is locked ([00:00:02](#)) ([00:53:54](#)).
- **Defining Core Product Modules:** Saras Satyam and Sumeet Shisodia defined modules as specific "flows" within the product, such as job posting and follow-up processes. The design goal is for these modules to be cohesive so that the hiring manager feels like they are operating within a single, integrated system rather than disjointed components ([00:03:41](#)).
- **Hiring Manager Pain Points:** Saras Satyam described a "Chinese whisper" phenomenon where hiring managers struggle to communicate specific requirements to recruiters, resulting in candidate profiles that do not match the expected persona ([00:05:56](#)). Standard one-page job descriptions are insufficient to capture the hiring manager's true intent or their desired candidate portrait. The product aims to bridge this gap between the hiring manager's mental model and the recruiter's execution ([00:07:05](#)).

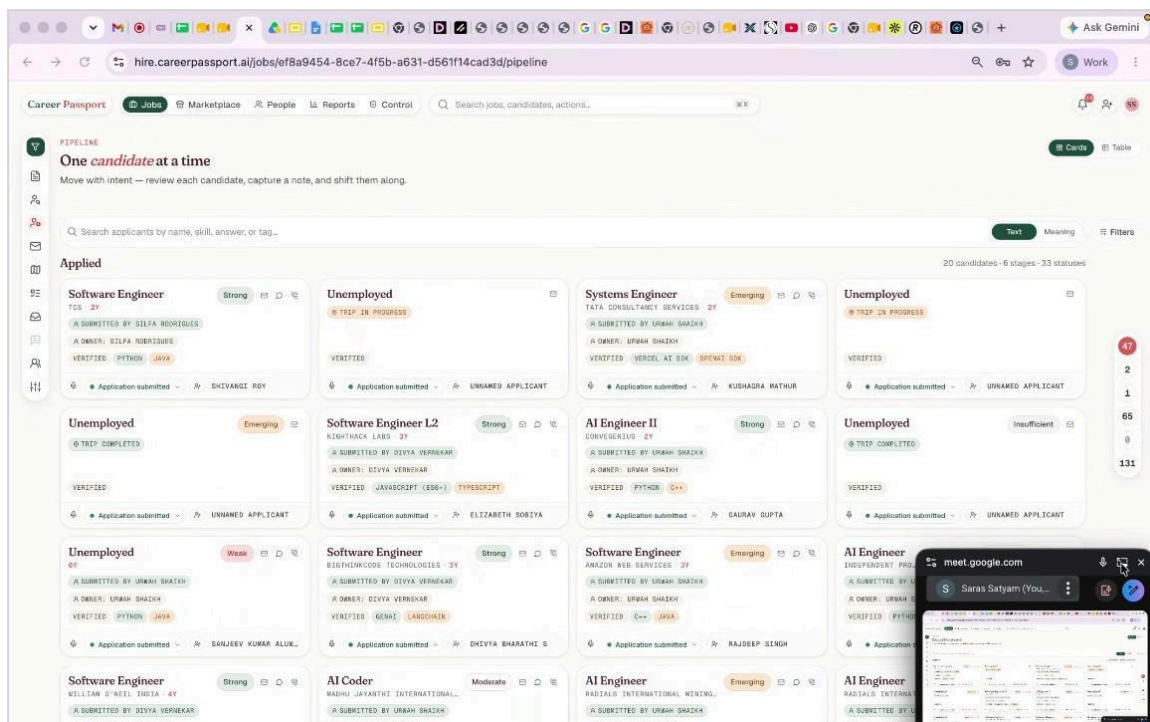

- Evidence-Based Hiring vs. Claims:** Saras Satyam argued that curriculum vitae are merely documents of claims and that the hiring process requires verifiable evidence. The team is building "assessment journeys" or "trips," which allow hiring managers to design specific evaluations—such as multiple-choice questions, screen shares, or AI critiques—that candidates must complete ([00:10:05](#)). This approach addresses the increasing recruitment effort, which has risen from 26 hours to 42 hours per mid-level hire ([00:11:35](#)).
- Handling Non-Technical Roles:** Soutik Mukherji inquired about applying these assessment journeys to non-technical roles like human resources, legal, or sales. Saras Satyam explained that for these roles, the journeys include role-playing scenarios, such as asking candidates to introduce themselves to a customer to address a specific pain point ([00:13:32](#)).
- Shifting the Hiring Paradigm:** Saras Satyam expressed an intention to transition the current "requisition-job description-applicant" model to a "business need-job evidence-candidate journey" model. The system is designed to allow hiring managers to provide an initial, unstructured description, which an Artificial Intelligence system then parses to identify contradictions or specific needs based on a domain-specific knowledge base ([00:14:44](#)).
- Job Posting and Inference Cards:** Saras Satyam demonstrated the job posting flow, where the system generates six "inference cards" based on user input ([00:18:17](#)). These cards define the ideal candidate, tribal details, required skills, evaluation criteria, and recruitment strategy. While the backend logic is complete, the frontend user interface requires further design work to improve usability ([00:19:26](#)).
- Assessment Trip Mechanics:** The system creates a "spine" for an assessment trip derived from the inference cards. Saras Satyam explained that "levers"—tools to design candidate experiences—are used to structure these trips ([00:20:38](#)). There are nine planned levers, including coding rounds, rapid-fire questions, and live demos, with three currently in production and six in development ([00:23:12](#)) ([00:25:50](#)).
- Automation of Trip Design:** The system uses Artificial Intelligence to automatically generate a trip spine, but hiring managers retain the ability to manually adjust instructions and select specific levers ([00:24:33](#)) ([00:28:00](#)). This functionality aims to enable hiring managers to define the exact experience candidates undergo before reaching the interview stage ([00:28:00](#)) ([00:36:53](#)).

- **Candidate-Side Experience:** Saras Satyam provided an overview of the Career Passport B2C product, currently in the build stage. Candidates interact with the platform through an application form, which initiates a "companion mode" that tracks their progress and interactions across all applications for that email address (00:41:55).

- **Pipeline Management and Workflow:** The recruiter's interface provides a table and card view for tracking candidates through stages such as applied, screened, submitted to client, and interviewing. The system supports semantic search, candidate tagging (e.g., "first principal thinker"), and voice-to-text feedback recording (00:47:48). Furthermore, if a candidate is not selected for one role, they can be moved to a different pipeline, allowing for efficient talent redeployment (00:51:30).

- Terminology and Language:** Saras Satyam confirmed that the team is open to changing product terminology, such as "trip" or "companion," if better alternatives are proposed that align with the brand's goal of fostering trust between employers and candidates ([00:45:23](#)).
- Project Next Steps and Design Alignment:** Sumeet Shisodia plans to set up a WhatsApp group for direct team communication ([00:52:30](#)). The team will work on wireframes and a design system simultaneously to ensure visual consistency ([00:53:54](#)). Saras Satyam suggested looking at modern Artificial Intelligence software-as-a-service companies like 11 Labs, Clay, and Rocks for design inspiration, emphasizing the need to align with the website development work being performed by Hiteshwar ([00:54:57](#)).
- Project Timeline and Professional Standards:** Sumeet Shisodia agrees to hold an internal discussion to define a project timeline and payment availability. Saras Satyam requests this information to address inconsistencies in product videos and user manuals, emphasizing the need for a professional touch that aligns with the standards of their tech co-founder, who is an alumnus of the Indian Institute of Technology Bombay. To facilitate this, Saras Satyam asks for an example of work that they can present to Rajit. Sumeet Shisodia commits to providing a rough timeline by the end of the day ([00:57:28](#)).

- **Communication and Documentation Strategy:** To streamline collaboration, Saras Satyam proposes the creation of a WhatsApp group to exchange audio notes and refine the work ([00:57:28](#)). Sumeet Shisodia agrees to the suggestion and commits to creating the group immediately. Regarding the documentation process, Saras Satyam expresses a desire for structured information sharing rather than unstructured document dumps, noting that they will help organize the materials. Additionally, the participants discuss the strategy for project delivery, considering whether to proceed in phases or as a single shot ([00:58:57](#)).
- **Meeting Conclusion:** The meeting concludes after all participants confirm they have no further matters to address at that time. Aishvarya D and Soutik Mukherji provide no additional input, and the participants exchange parting remarks ([00:58:57](#)).

Career passport design discussion - Transcript

00:00:02

Sumeet Shisodia: Okay, cool. The goal is to leave with that idea. Okay, that what are some of the core modules that the business sees in a module that he wants us to pick first? I will I will try and help. So the guy's name is Saras right uh and basically in the initial part in that module what are some of the core functionalities that he wants he has already mentioned you know some relevant competitors and then it is it'll be up to us right to come up with

Soutik Mukherji: H.

Sumeet Shisodia: a wire frame set up a similar thought process okay we first show you a wireframe then we'll move to

Soutik Mukherji: Hm.

Sumeet Shisodia: UI okay we'll first get the UX right

Soutik Mukherji: Correct.

Sumeet Shisodia: and for that module How will that module functionalities work?

Soutik Mukherji: Correct.

Sumeet Shisodia: Once we know that you guys come up with a timeline, okay, this is when we will share this. This is when we'll share this. Okay. Largely keep it around this so that it is focused.

00:00:59

Soutik Mukherji: Huh? Works.

Sumeet Shisodia: Okay. Okay. Okay. I'm taking transcription notes from Gemini also and whisper also. Then you guys can compare which is a better product.

Aishvarya D: Okay.

Sumeet Shisodia: Okay.

Soutik Mukherji: LinkedIn post had an experience transcribing from Gemini and Whisper. This is what I learned.

Sumeet Shisodia: Yeah.

Saras Satyam: Hey. Hi. So,

Sumeet Shisodia: Hello as far as

Saras Satyam: good. Good.

Sumeet Shisodia: you.

Saras Satyam: Good. Hey.

Sumeet Shisodia: So uh sir just a quick uh intro.

Soutik Mukherji: Yes.

Saras Satyam: Hey.

Sumeet Shisodia: Uh so uh Soutik is a lead designer at Misho. So he will be leading the project for us and Aishvarya is at uh

Saras Satyam: Uh-huh.

Sumeet Shisodia: Adita Bella.

Saras Satyam: Okay.

Sumeet Shisodia: uh so she's also a designer there in the B2B segment. So um Soutik and Aishvarya will be primarily helping us uh with the

Saras Satyam: Mhm.

Sumeet Shisodia: uh project with the design and u I'm here to set the context that I have and uh also wanted you guys to directly meet uh so that uh you know whatever questions I have and assurance and something else we can directly ask you and uh hopefully get started.

00:02:33

Saras Satyam: Yes. Yes. So uh did you get a chance to go through the product existing

Sumeet Shisodia: Yes. Yes.

Saras Satyam: product?

Sumeet Shisodia: Yes. I shared it with these guys also. They have also uh gone through it.

Saras Satyam: Okay.

Sumeet Shisodia: Um so yes,

Saras Satyam: I shared login also with you or

Sumeet Shisodia: yes, you did.

Saras Satyam: no?

Sumeet Shisodia: You did. Yeah. Yeah. You had given us the login.

Saras Satyam: Okay. Okay.

Sumeet Shisodia: I mean you're talking about the portal,

Saras Satyam: Okay.

Sumeet Shisodia: right? Like the hiring manager portal.

Saras Satyam: Yeah. Yeah.

Sumeet Shisodia: Yeah. Yeah.

Saras Satyam: Yeah.

Sumeet Shisodia: Yeah. Yeah. We did. We did. we didn't go through it. Um so basically just so just to set up the agenda for the meeting Saras uh we did read the answers also that you had given uh for the question and thanks for that. So uh basically what we were thinking that we should focus on today's meeting is uh and something that will help us keep a broader eye on this is from your perspective what are some of the broader modules that you see for uh career passport right like for example when you see from a bird's eye view what do you think like do you distribute career passport in three modules four modules five modules Right.

00:03:41

Sumeet Shisodia: And what would be those?

Saras Satyam: Yeah.

Sumeet Shisodia: Okay.

Saras Satyam: What would be what's the definition of module in your mind?

Sumeet Shisodia: Module is in like uh let's say sorry can you come

Saras Satyam: Flows.

Sumeet Shisodia: again?

Saras Satyam: Is it flows? Uh five major flows.

Sumeet Shisodia: Yeah. Yeah. You could say that. Let's say for example posting a job could be one module right and then

Saras Satyam: Okay. Perfect. Perfect. Perfect.

Sumeet Shisodia: following up on that is another module.

Saras Satyam: Understood.

Sumeet Shisodia: Correct. That's one.

Saras Satyam: Understood.

Sumeet Shisodia: And uh because then Because for a designer that always helps to broadly understand because then we'll be able to tie up everything with one another also towards the end. We'll also keep in mind the other thing it should not feel like I have moved from one to a completely new system right everything if possible should talk to each other so that's one broader modules you know what do you think from your perspective and then in the module that you would like us to pick immediately the first one right let's say for example the job job application

00:04:46

Saras Satyam: Yes. Yes. Under

Sumeet Shisodia: what do you think career passport like from your perspective roughly what do you think the flow should be? Obviously we will audit that. We will come up with our own ideas you know we will also argue with you whatever right but from your perspective you know what is what is the main flow that you think and where do you think the edge lies with career passport right maybe you can tell us I mean we we all of us have not been in the uh hiring side of the things so we have a very vague understanding of how it works uh on the HRZ but uh uh when Let's say for example right that will give us a much much clearer picture of problem

Saras Satyam: Done.

Sumeet Shisodia: solve and then once I think we are done with today's session similarly we'll do sessions for all such

Saras Satyam: Sum did you can you can you share the document that uh uh Nishand would have shared

Sumeet Shisodia: modules.

Saras Satyam: which is conversation to closure.

00:05:56

Sumeet Shisodia: Yes.

Saras Satyam: I think I've shared with you.

Sumeet Shisodia: Yes. Yes.

Saras Satyam: that has I think so let me start with the first uh uh

Sumeet Shisodia: You remember this one,

Saras Satyam: first yes yes uh we will discuss this

Sumeet Shisodia: right?

Saras Satyam: uh this is one flow so hi sautik hi ashara uh nice nice to connect sautik you

Sumeet Shisodia: Okay.

Saras Satyam: are currently also working with misho or you were

Soutik Mukherji: No,

Saras Satyam: working okay perfect so and

Soutik Mukherji: I am currently working in my shop.

Saras Satyam: you are also helping sumit so you we will be working together I guess Right. Uh perfect,

Soutik Mukherji: Yeah.

Saras Satyam: perfect. So in terms of the user flow, first let me tell about who are the users of uh this product and then from there I will stitch to the flow. So the first user is the hiring manager. Right? If uh uh the main point that we want to solve for the main pain point of a hiring manager is there is a massive Chinese whisper that happens and eventually the number of CVs that come or number of profiles that land are not matching to what the hiring manager expects.

00:07:05

Saras Satyam: What I mean by this is key suppose Sumeet is a hiring manager he wants to hire Soutik. Yeah. Sumeet comes has a ideal portrait in mind. So design course and say these are the things that is there in the hiring man's mind. Now translating in the current scheme of things this entire thought in the mind gets translated to a onepage JD right as a career passport as a product my problem starts there only that one page JD is not sufficient to capture what is there in hiring manager's mind. Second, when the hiring manager tells this to the recruiter, recruiter understands only 70% of this or 50% of this. Right? So, Sumeet has lot in mind and he is telling to the recruiter who is a one year experience person or five year experience person that person uh has to go ahead and do the hiring or do the job posting, find CVs. So it is very important that the recruiter should get full gest of what Sumeet wants to tell. In fact, Sumit also knows as a hiring manager where to hire from, which candidate pool is sitting where, which is the ideal company, what is not so good, what type of lookalike I should avoid and I am trying to attempt that part with the hiring manager flow.

00:08:45

Saras Satyam: Okay, first problem he's able to communicate fully and the product is able to understand that so that it can make the recruiters understand what persona is being hired for.

Sumeet Shisodia: Right.

Saras Satyam: Correct. This is the first user.

Sumeet Shisodia: Right.

Aishvarya D: Got it.

Saras Satyam: Uh so what it does is it does the uh it comes on the product, rambles about what he wants and then the product uh helps him design the entire job post. That is first part of it. Alone job post is not sufficient. uh job post should be coupled with what experiences or what should I know about the candidate that helps me decide who is good coding coding round CV doesn't tell how good you are in coding so there's a coding round say that tells uh uh okay how is your first principal thinking how is your design thinking how is your uh subject matter expertise which language do you use and so on. So, so that is the second flow which the hiring manager will do. The hiring manager will design what I need to evaluate, how I need to evaluate.

00:10:05

Saras Satyam: Both these things put together are called assessment journeys or trips in our product. So, the hiring manager designs a trip that they want the candidate to take before the candidate is met. Everyone is able to flaunt their CV or show what is requ

Sumeet Shisodia: Right.

Saras Satyam: second problem which I'm solving your claim is not enough and your CV V is a claim, a document of claim, a one-pager bulleted claims. That's not enough to decide. There should be evidence of what you are capable of. And to get that evidence, the hiring manager should design a journey that the candidate can go

through. The journey can have multiple choice question. Journey can have screen share and record. Journey can have pick some option and defend. That journey can have a AI critique call. That journey can have AI telephon call. In fact, the first application form think of that also as a journey designed by the hiring manager. Okay. So in the current scheme of things also people ask for CV.

00:11:35

Saras Satyam: Recruiters ask two three question maybe designed by the hiring manager. Recruiter then sends a assignment probably designed by chat GPT and hiring manager.

Sumeet Shisodia: Hey,

Saras Satyam: and then that assignment is submitted uh and then hiring manager has to go through those assignments that is also pure AI slop so people don't get to understand and hence the real industry problem is yesterday they used to spend 26 hours finding one guy. Today that number has increased to 42 hours. So a hiring manager for a standard mid-level hire will have to do 42 hours of effort to finally get that guy joined in the system.

Sumeet Shisodia: Thank.

Saras Satyam: And to uh the the first journey is of job posting. The second journey of is of designing the candidate uh experience which is through the candidate journey and this experience has uh two folds of thought. One is uh what to measure second is how to measure and that comprises of the trip and overlapping all these thing is the communication. What should the candidate be communicated? Suppose uh in in today's world there is lot of uh opakqueness whom are you going to meet in the interview candidate wants to know it it's not possible currently recruiters do it or don't do it types so I feel that can the hiring manager designs not only the job post but also designs the trip that the candidate will take to get the evidence of claims that the candidate is making and

00:13:32

Saras Satyam: also designs the communication journey throughout what the candidate should be communicated and then he launches the entire thing for uh any recruiter be it internal or external to take it up. Yeah. Sautik.

Soutik Mukherji: Uh so I wanted to understand a little bit of domain nuance to for product yeah tech roles I understand that there is a very hard skill that can be evaluated tech people they can be asked to do code uh design let's say some design showcase can be done uh how are we uh making these journeys for roles that are not having like this very cut and dry hard skill attached to it let's say let's say HRO legal cases.

Saras Satyam: skills.

Soutik Mukherji: How are we doing it?

Saras Satyam: HR legal or sales also is an example I can take.

Soutik Mukherji: Yeah.

Saras Satyam: Uh so uh we for sales for example the journeys will be of role plays the journeys will be of introduce yourself to a customer who is

Soutik Mukherji: Okay.

Saras Satyam: in this domain and this is the pain point of the customer right so in

00:14:44

Soutik Mukherji: Got it.

Saras Satyam: fact when we go through the product I will show you what all things we have designed as a part of the journey and maybe I can give a quick run through of the product to uh make these things very very

Soutik Mukherji: Hm. Mhm. Okay, that would be helpful,

Saras Satyam: So uh this this document actually sumit uh why I wanted you to share is

Soutik Mukherji: huh?

Saras Satyam: this is what we want to build in phase one whatever

Sumeet Shisodia: Right.

Saras Satyam: but uh today's model if you see the first line is requisition job description

Sumeet Shisodia: Mhm.

Saras Satyam: applicant I want that model to change to fundamentally business need job evidence model and candidate journey and then candidate ates the shortlisted

Sumeet Shisodia: Right.

Saras Satyam: candidates and uh this document I I feel has uh everything that I want to communicate it is detailed enough uh and if we go down uh screen wise I have tried telling what uh exactly step by step one let them ramble so who is a hiring manager will come and just tell then AI starts finding contradiction okay I want to give two three trade I will put it across this this currently is not there in our product.

00:16:14

Saras Satyam: This can be the phase 2 design but this will

Sumeet Shisodia: and this will come from some sort of a database knowledge uh

Saras Satyam: come this will come from the uh AI call that uh LLM call that the product will do

Sumeet Shisodia: for

Saras Satyam: after listening to your ramble

Sumeet Shisodia: right no I'm saying how will the LLM decide that there are contradictions here in the ask.

Saras Satyam: the LLM has that knowledge base domain wise to understand these

Sumeet Shisodia: Okay. Right. Okay. It last. Okay. So, we we right now we'll just take that assumption that it has that knowledge base for us to design it.

Saras Satyam: Yes. Yes.

Sumeet Shisodia: Right. Okay.

Saras Satyam: Yes. Okay. And then when we go down uh you see uh like uh there are some sample people they would want to meet 7 year experience 2 year LLM knowledge versus 4 year engineering experience one year LM knowledge. So ideally we will show the profile All these things we are doing to an to do an objective which is mentioned in the next page.

00:17:16

Saras Satyam: I want this and eventually learn. You are not gathering requirement. You are discovering preference. And eventually learn the manager values agency more than pedigree. Product institution greater than ML design research dep the the bulleted points. Python proficiency is necessary but doesn't need separate assessment. Okay. And then I'm telling key this is the journey part uh which the hiring manager gets to design. Okay. And then uh I have tried designing the journey. So I can maybe take you through the product on how it is happening today.

Sumeet Shisodia: Got it.

Saras Satyam: uh is it going in line with what uh we need to discuss or it's a

Sumeet Shisodia: No, no, no. Yeah, I think we are absolutely in line.

Saras Satyam: deviation.

Sumeet Shisodia: I have a much clearer understanding. Uh something can I show up? We are we are in sync,

Aishvarya D: Yeah.

Sumeet Shisodia: right?

Aishvarya D: Yeah.

Sumeet Shisodia: Okay. Okay.

Saras Satyam: Perfect. Yeah,

Aishvarya D: Yeah.

00:18:17

Saras Satyam: I'm just uh signing in and I'm currently taking you through the uh a job posting flow. Have you gone through a job posting flow all of you?

Soutik Mukherji: Yes,

Aishvarya D: Yeah.

Sumeet Shisodia: Yeah.

Soutik Mukherji: I dummy.

Sumeet Shisodia: F.

Saras Satyam: Huh? Correct. Correct. So job posting flow what happens? Uh you post a particular job and then uh there are six inference cards that are shown to you. Uh and now basis that inference card uh you make the changes. Inference card are basically what the system has understood from what you told. Uh so ideal candidate portrait, tribal details, must have good to have skills, evaluation criteria, sourcing strategy, all those things are there in the inference card which I want. Go ahead.

Soutik Mukherji: Uh the screen is frozen I think.

Saras Satyam: No, I'm currently not showing

Soutik Mukherji: Oh okay.

Saras Satyam: that.

Soutik Mukherji: Okay.

Saras Satyam: Anyway, so if you look at the job, these are the six things uh that the that gets

Soutik Mukherji: Got it.

00:19:26

Saras Satyam: decided. Ideal candidate, tribal detail, skills expected, evaluation framework uh evaluation frame,

Soutik Mukherji: Got it.

Saras Satyam: year of experience and recruitment strategy or talent. This is critical. So everything that needs to be evaluated comes here. The sourcing playbook target noy indeed long this people HR tech avoid general vendor payroll compliance type of people must have red flag is also written now you see that uh the UIUX the UI is not thought through hence it is coming this way right there lot of things we have designed the back end we have not thought much about the front end and uh that is where you guys will start thinking through. So, uh this is the second step and then it goes on to create an application form and then it goes on to uh publish the job and after the job is published say this is the trip where you can generate a new trip. I'm just showing you an existing trip. So, what happens is uh this is the view you get. So, these are the livers of the trip.

00:20:38

Saras Satyam: I'm telling this is the spine of the trip. I'll tell you the logic what happens when you go and talk to the product. It creates a spine of what you are looking for and it also has all the six inference cards. So you are you will be the so this is the spine of the scenario basis which all the livers will adapt itself. Let me let me take a step back. I think there are a lot of new things I'm telling at the core of it while

Soutik Mukherji: Yeah.

Saras Satyam: designing a trip you you select the livers that you want to use. Livers are the the tools that enables you to design the experience that you want the candidate to take. For example, rapid fire is a liver. Rapid fire has these three statements start with boolean search on noy which is relevant to this job. So each of the statement can either be serious or joking and then the user just clicks on uh serious and joking and then gets done with the rapid fire.

00:21:51

Saras Satyam: So I have these are the three cards that we have currently these are the three levers that we currently have to test uh a particular uh candidate's capability. So demo is one lever for this use case uh say this is the queue that is given you are sourcing strategy lead at career passport. Uh Rajes is skeptical about proposed uh boolean search. Record a live demo showing what you will do in the next 30 days, next 90 days. So a person who is taking this uh experience will get to start with the record a demo button. the screen and video will get captured and he can run through what he wants to talk and then eventually it is saved and it is available for the hiring manager to view. So at the core of it whatever you tell uh to the product creates the six inference card bases those six inference card a trip spine gets created where what domain domain role con this gets created at the back

Sumeet Shisodia: Right.

Saras Satyam: end and this is what is used to design these levers.

00:23:12

Sumeet Shisodia: Right. And what are all the levers uh right now uh at our disposal,

Saras Satyam: So all the lever Right now there are

Sumeet Shisodia: sir? Like

Saras Satyam: total nine levers. Uh nine levers are uh first one is a multiple choice. Second one is binary choice. Third one is rank order which reveals the preference. Fourth one is AI critic. Fifth is pick and defend. Sixth is do a demo which is mentioned here. uh so pick and defend and do a demo is being used for this particular uh assessment uh that we have generated. So any of these nine levers can be used. Seventh one is coding round. Eighth is case study round. and ninth is flaunt or flex. All these levers uh like will get the same six inference card that tells them what type of candidate is being looked for, what level of complexity and context is required and how

Sumeet Shisodia: Right.

Saras Satyam: exactly uh we need to do it.

Sumeet Shisodia: So one question here sus uh let's say once the spine is defined then do you want the system to automatically generate all of the levers uh in the correct

order which will be relevant for that uh job role or do you want the hiring manager to go

00:24:33

Saras Satyam: Yes.

Sumeet Shisodia: and select the liver and create some sort of a journey manually because he knows

Saras Satyam: So I huh so I'll tell you how currently it happens.

Sumeet Shisodia: Yes.

Saras Satyam: uh to your question yes he knows best and the best product which we are currently building the best product will be the MCP that connects your claude to uh this particular trip design system MCP do you have

Sumeet Shisodia: Okay. Yeah.

Saras Satyam: idea perfect so uh what it will do is you will talk to

Sumeet Shisodia: F.

Saras Satyam: clot key I need so and so kind of person and that gets connected to career passport MCP by page using my product the experience gets designed and the hiring manager can view that experience. I'll just show you currently how it happens. So when I click on generate trip what I get is okay where do I need to put okay in screen stage rapid fire no air I want only four questions I'm just uh putting the the broad things uh I I'm not telling anything in detail and then if there's some instruction I can just click on the mic and tell I want so and so and then I click generate rip.

00:25:50

Saras Satyam: So first spine gets generated then rapid fire. These are the three levers that are uh that are currently in production. Other six levers are currently in dev stage only uh which will go out

Sumeet Shisodia: Come.

Saras Satyam: production in a week's time. The reason why I'm talking about trip also because I want to first freeze on the uh hiring manager experience which is the which is the most critical experience for people to start coming and uh start doing the job posting through our product.

Soutik Mukherji: uh so sus had a doubt so in this like uh if I'm understanding let's say uh someone chooses a lever of demo and then the second one is uh let's say coding round it is still not the rounds of interview that the candidate goes through today right like these are still in the same experience for the candidate like in the continuous experience for the candidate.

Saras Satyam: Yes. And the way I decided this stage uh similarly uh when the candidate reaches that stage, he will be put across through this

Soutik Mukherji: Oh,

00:27:02

Saras Satyam: journey.

Soutik Mukherji: so uh let's say candidate is in the second round of their like hiring process. They can see separate set of levers that they have to interact

Saras Satyam: Yes. Yes. Yes.

Soutik Mukherji: with.

Saras Satyam: Separate journeys at a broad level. Levers are internal word or the uh back end word.

Soutik Mukherji: Understood. And then in all of this will there be like a traditional interview with let's say the hiring manager or

Saras Satyam: Yes, that will be the final round. We cannot replace that round like nobody nobody will give us are you tell whom to

Soutik Mukherji: uh

Saras Satyam: hire and we will hire. They will definitely have the final say final round which is pure human. But what my ambition is other than CV there are lot of other things that the hiring manager can see before he decides whom to meet.

Sumeet Shisodia: Yeah.

Soutik Mukherji: Got it.

Sumeet Shisodia: The problem problem we are solving Soutik here is who to interview.

Soutik Mukherji: Got

Saras Satyam: uh huh so uh and then uh designing that candidate

00:28:00

Soutik Mukherji: it.

Saras Satyam: experience I don't make you do 1 hour of coding round and then 2 hour of some other round before I think of meeting you if I can know about you in uh quick 10 minutes 15 minutes to have a sense or I can separate good from bad uh I would want to do that and This is our attempt to get that done. So when I clicked on generate what now it has generated. It has not asked me much. It has given me a spine. You have joined a midstage recruitment consulting as head of sourcing. Say this is the spine. Uh basis this spine all these levers get created. If I want to add I can add some other lever. Uh that also again gets added.

Soutik Mukherji: Uh one doubt here is this spine talking about the hiring manager or the candidate who we are hiring

Saras Satyam: Come again. Is this spine? This spine is going to talk uh to the candidate.

Soutik Mukherji: like

Saras Satyam: This spine is the back end by which these uh levers are generated.

00:29:09

Soutik Mukherji: uh so it is like a description of an ideal candidate. Can I interpret it like that?

Saras Satyam: Spine. No, no, no, no, no. Spine is the description basis which all the trips

Soutik Mukherji: Yeah.

Saras Satyam: get created. So if if you have joined a mid-stage recruitment consultancy as a head of sourcing, you will do good in this trip if uh uh you are there. So like uh these things get generated. You are 10 days into the role. Leadership expects so and so. So this gets generated bases this spine and the six inference card.

Soutik Mukherji: Okay.

Sumeet Shisodia: Yeah, the six influence cards sus does it get generated right now on the platform?

Saras Satyam: Uh-huh.

Sumeet Shisodia: Okay. Okay.

Saras Satyam: So that

Sumeet Shisodia: That will happen I guess after after we complete or after somebody completes a

Saras Satyam: is

Sumeet Shisodia: trip.

Saras Satyam: no no massive wait is there any better way of doing it actually there are lot of things that's there should I give a document should I give a uh product walk through uh because currently I think uh I'm I'm feeling that I am not able to communicate everything that I want to communicate What is the best practice uh that we can

00:30:43

Sumeet Shisodia: I mean generally u I mean the form itself does not really

Saras Satyam: have

Sumeet Shisodia: matter uh as long as uh all of us can communicate. I mean we have done whiteboard sessions also. uh I mean since you already have like a uh prototype of the product uh I think that is much better than anything uh and it's okay I think we'll resolve u you know the questions over period of time so uh no problem in that I think we can continue with the product showcase only service in my opinion Soutik any other thoughts

Soutik Mukherji: I think works uh basically I just under uh wanted to understand broadly um let's say terms define how are they linking with one another it gives us a sense key when we actually build it in like the UI um how will the user or the hiring manager interpret it as so that's why I wanted to

Saras Satyam: Okay.

Soutik Mukherji: understand

Saras Satyam: Okay. Should I give a document telling all these things? Will that be of help? It is back both back end and front end which I want to explain uh which is required.

00:32:03

Saras Satyam: Uh just example AI engineer. AI engineer is it something which everyone can resonate relate with.

Soutik Mukherji: Yeah.

Aishvarya D: Yeah.

Sumeet Shisodia: Yep.

Aishvarya D: Yeah.

Saras Satyam: So suppose we want to hire a AI engineer.

Soutik Mukherji: Yeah.

Saras Satyam: You come and ramble and basis what you want. Say this gets generated your ideal candidate who is ideal candidate. So system has uh understood what you want and then given this to you for you to edit. It happens in the job posting

flow. It also reflects here. So you have spent two four year building real system that recruiters and users rely on not prototype. You are fluent in typejs uh comfortable owning LLM pipeline end to end prompt design structured output validation retrievable you have shipped with open AAI entropic or similar provider debug this so ideal candidate I have defined this way some salary I have defined What skill expected production LLM integration with TypeScript back end prompt engineering and LLM evaluation at scale structured output validation and schema enforcement posgress and vector search optimization async AI infrastructure and observability.

00:33:15

Saras Satyam: This is as expected some must have and uh red flag is mentioned here. Uh where will I get these people?

Sumeet Shisodia: Great.

Saras Satyam: Fresh work zoo postman early stage AI startup with this stack vers superbase render deployed with sector a IML SAS platform recruiting tech and HR tech so we are looking for uh AI engineer for career passport only and hence uh HR is repeating someone who has done in that domain what I'm looking for what is the evaluation criteria 2 to four years of software engineer experience And these multiple things are mentioned

Sumeet Shisodia: Right.

Saras Satyam: here.

Sumeet Shisodia: Right. You completely understood this piece. Yeah. Yeah.

Saras Satyam: Understood.

Sumeet Shisodia: Yeah.

Saras Satyam: After which you make changes if you want to make changes by editing, typing and all and then you freeze. Yeah, these are the six things that I want the system to understand.

Sumeet Shisodia: Okay. Okay. Yeah.

Saras Satyam: Now base these are the

Sumeet Shisodia: Right. So these are the infense card. Okay.

00:34:18

Sumeet Shisodia: Understood. Yeah. Got it. They they they are created by the system once you ramble your input.

Saras Satyam: inference. Yes. Once this is created the system is designed to create your application form to create the draft of the candidate journey and to create the communications line completely. Where is it mentioned? It is mentioned in the left panel. communication trip and all the things that are required in the pipeline. So when I go to the trip of this particular uh uh like uh this particular job post, I'm just taking you through these strips. So the strip is composed bases the six inference card and a system prompt in a layman language to understand like this and every every

Sumeet Shisodia: Right.

Saras Satyam: lever has its own system prompt has its own variable

Sumeet Shisodia: Right.

Saras Satyam: requirement and all the variable requirement gets fulfilled basis the six inference cards.

Sumeet Shisodia: Understood.

Saras Satyam: Okay, there are some variable requirement that gets uh covered when uh you are designing this trip. So in this trip uh when I showed you when I clicked on generate over there you were able to see that I'm able to make the changes.

00:35:41

Saras Satyam: This trip is already hosted. Hence uh I'm not able to make the change. But if you look at rapid fire for AI engineer look see this statement. This statement is generated by the uh system. If a failed agent runs The fail agent run is replayed successfully with the same prompt and model. The original failure probably wasn't

caused by the LLM. So a user a candidate can tell whether it's this statement is serious or joking.

Sumeet Shisodia: Right.

Saras Satyam: This helps to this helps the hiring manager

Sumeet Shisodia: Understood.

Saras Satyam: understand.

Sumeet Shisodia: Right.

Saras Satyam: So all the all the levers has different objective.

Sumeet Shisodia: So,

Saras Satyam: Doing a demo is showing your work in action.

Sumeet Shisodia: right.

Saras Satyam: Doing a rapid fire is helping the hiring manager quickly understand key fundamentals are clear.

Sumeet Shisodia: Right. So, so sir basically on let's say once these inference cards are prepared by

Saras Satyam: Yes.

Sumeet Shisodia: the system then the trips are also automatically then the system goes ahead and defines a trip.

00:36:53

Sumeet Shisodia: At this stage I need to give some more input for it to define the

Saras Satyam: Both are physibile. Both are physibile.

Sumeet Shisodia: trip.

Saras Satyam: uh if you have it in your mind to give some more input uh while the basic draft is generated you can do that. Uh if you want to manually make changes in which statement to be asked you can do that and

Sumeet Shisodia: Okay.

Saras Satyam: then finally make all the changes so that you feel this is the experience every candidate should go through before he

Sumeet Shisodia: Okay. Understood. Before he reaches the interview round, right?

Saras Satyam: Yes. Yes. And this intervention can be at multiple stages.

Sumeet Shisodia: Take care.

Saras Satyam: So the moment uh someone has shown interest in the job he gets the application

Sumeet Shisodia: Right.

Saras Satyam: form. Assume that that is also one drip which takes one minute which just takes upload your CV, write about

Sumeet Shisodia: Right. So basically each round can have multiple trips like third

Saras Satyam: it.

00:37:47

Sumeet Shisodia: round that is up to me. Right. Right.

Saras Satyam: Exactly.

Sumeet Shisodia: Okay. Sure. Depends on Right. Right.

Saras Satyam: CTO

Sumeet Shisodia: Right.

Saras Satyam: same I'm telling uh there are multiple such rounds that can be designed and the

Sumeet Shisodia: Right.

Saras Satyam: hiring manager doesn't need to come and design it multiple times we are telling that this problem can be solved in one go and then you can automate this funnel candidate manager those things get designed while designing

Sumeet Shisodia: Understood.

Saras Satyam: the job only. Uh so the whole objective is rum doesn't tell much. So can we have these levers that can actually tell whatever is required.

Sumeet Shisodia: Makes sense. Makes sense. So, So these are the two major flows that you want us to look at. Uh,

Saras Satyam: Yes.

Sumeet Shisodia: next at the start.

Saras Satyam: Yes. Yes. So, first one is the job posting flow for which I have given a detailed document.

Sumeet Shisodia: Correct. Correct.

00:39:07

Saras Satyam: The second one is this uh uh this uh

Sumeet Shisodia: Just the spine and the liver as well as

Saras Satyam: aha trip and something which I want to go in line

Sumeet Shisodia: right.

Saras Satyam: both with. So this is the way to evaluate this is what we communicate.

Sumeet Shisodia: rate.

Saras Satyam: So when you communicate there are lot of templates uh that can be designed and communication is what to tell at what stage and how customized and personalized it can be.

Sumeet Shisodia: Right.

Soutik Mukherji: This is currently at a job level. Yeah. Like

Saras Satyam: Yes. currently at a job

Soutik Mukherji: for

Saras Satyam: level

Soutik Mukherji: All

Saras Satyam: and then we can AI can generate the message draft with AI. A I can generate you can edit it and whatever you edit it reflects on the right hand side you can see and then uh you freeze on a template save the changes and

Soutik Mukherji: right.

Saras Satyam: then you tell candidate your prospect applied screen submitted to client submitted to client stage message key good going your your trip is successfully submitted and uh we are pushing your profile to the candid client So uh that that way

00:40:30

Soutik Mukherji: Got it.

Saras Satyam: uh this communication page is the other thing which uh we will be designing but currently we can focus on the job posting flow and the trip design flow

Sumeet Shisodia: H understood. Sure. Makes sense. Um I have one question s let's say for example just hiring

Saras Satyam: and

Sumeet Shisodia: manager perspectives.

Saras Satyam: uh

Sumeet Shisodia: Uh the first question is that uh do you have uh the views for or some uh imagination on the views of uh the job applicants view or do you want us to take a stab at that also just spine or liver because he is then the applicant. So

Saras Satyam: screen share.

Sumeet Shisodia: Yeah,

Saras Satyam: Oh,

Sumeet Shisodia: you can

Saras Satyam: that also I think Nishant would have shared with you. Let me uh show it here

Sumeet Shisodia: see

Saras Satyam: again.

Soutik Mukherji: Oops.

Saras Satyam: f***.

Sumeet Shisodia: or it's okay. Yeah, I mean we can cover that in the next club or you can just share with me I'll

Saras Satyam: Okay.

00:41:55

Sumeet Shisodia: share it with the folks.

Saras Satyam: to we have the B2C side of the product and every communication with the candidate will go into uh this particular product only.

Sumeet Shisodia: Right.

Saras Satyam: So the first step is he fills in the application form. Basis he he him filling the application form we ask him to uh we kind of create a login for him and tell that this is where everything uh will be coming in. And if we look at this product uh so this is the real uh career passport B2C side which is currently in the build stage only.

Sumeet Shisodia: Great.

Saras Satyam: Uh but when you enter as a demo traveler this is actually how your product will look and feel. And this place which is the apply page. This place will have all the applications which is going on. And normally this will be the companion view like uh this is how the trip will come. Okay. Al critic the reconciliation questions asked properly that you understand the thing you built not just that it runs and when you click on uh you are taken through that experience.

00:43:28

Sumeet Shisodia: Okay.

Saras Satyam: So opening the trip so and so this trip is in the dummy mode hence it is not coming but uh at a broad

Sumeet Shisodia: Sorry. Sorry. part for example applicant. So where did I applying and when did I apply?

Saras Satyam: basically

Sumeet Shisodia: Oh. Okay.

Saras Satyam: link engineer application link. So the this is your first interaction with a particular job is this AI engineer which

Sumeet Shisodia: Okay. Understood.

Saras Satyam: come your CV do the four steps and at the end of four steps I tell

Sumeet Shisodia: Understood.

Saras Satyam: you give me the OTP and uh you will have one place where you

Sumeet Shisodia: And then you will And then you will come here.

Saras Satyam: can companion mode

Sumeet Shisodia: Mhm.

Saras Satyam: companion is someone who knows everything about what's going on on this email ID and

Sumeet Shisodia: Understood.

Saras Satyam: uh uh it can from here uh pick it

Sumeet Shisodia: Right.

Saras Satyam: up.

Sumeet Shisodia: So my second question was sus uh on the aspect of terminologies that we have used just say for example are we also free to let's say look at these termin For example, calling it companion here or the word trip if we might have any inputs on key is because uh you know for XYZ reason or if it's very affiliated with the brand let's say for example if that is what you want to be the lingo uh tomorrow then we'll keep it as it is.

00:45:23

Sumeet Shisodia: How open is that for uh uh

Saras Satyam: fully open air uh fully open.

Sumeet Shisodia: change?

Saras Satyam: Uh it is perfectly fine. Uh we can negate if we don't like it.

Sumeet Shisodia: Okay.

Saras Satyam: uh but uh you should be able to propose and uh it shouldn't like uh it should relate to career passport as a concept that career passport as the mechanism by which it

Sumeet Shisodia: Right.

Saras Satyam: makes the transaction between evaluator or employee and employer very very uh coherent like very very

Sumeet Shisodia: Right.

Saras Satyam: trust based. So it's a layer of trust that helps a good candidate tell that I am good and

Sumeet Shisodia: Right.

Saras Satyam: uh career passport helps uh hiring manager understand what they want to see and reflect that in the product.

Sumeet Shisodia: Right.

Saras Satyam: Okay.

Sumeet Shisodia: Sure. Okay. Pecess.

Saras Satyam: uh uh Smith what I'm also doing is I am sharing you uh the broad concept note of candidate side uh recruiter side and company side from a website building perspective and so

Sumeet Shisodia: Okay.

00:46:34

Saras Satyam: that that probably will help you uh precisely understand key

Sumeet Shisodia: Okay.

Saras Satyam: why something is being done the way it is being

Sumeet Shisodia: Okay.

Saras Satyam: done and you can uh if you want you if

Sumeet Shisodia: Okay. Sure. All

Saras Satyam: you want I feel you can go through the document that I have shared uh which is from conversation to closure that has the complete uh journey of the hiring manager job posting so the loop that happens is hiring manager post a job after he has

Sumeet Shisodia: right. H.

Saras Satyam: posted the recruiters my screen is visible after he has posted the

Sumeet Shisodia: Yeah.

Saras Satyam: recruiter goes through uh series of flows uh this is the place where recruiter saves its database uh in people section right suppose this candidate is relevant I can move this candidate to what say this candidate is relevant I can move the candidate needs to have a email id can move him to AI engineer pipeline I can add as a prospect when I have added as a prospect I can see that candidate in the AI engineer prospect section.

00:47:48

Saras Satyam: Muskan is here. Now to Muskan I can send a email. Email helps me open this. So I do the communication with Muskan. After that, found him found Muskan good. I move over to the pipeline. In pipeline, this is how the candidates look currently which needs change. But at a broad level, there is a table view and there's a card view. It helps me go through it. Every candidate uh I take them through all these stages. Applied, screened, submitted to client, interviewing, offered or rejected means archived. And I can do a semantic search on the candidate. I can put a filter whatever filter I want. Every candidate opens like this where the CV is open and uh where I can provide my ratings. I can select tags that helps me define the candidate. I can add a tag super communicator. Okay. first principal thinker kind of and uh I can delete that also. And this is where I can then click on the mic button.

00:49:11

Saras Satyam: This candidate is worth meeting. She is good and uh we should meet. I'm just testing it. Don't take my feedback seriously. Okay, the node comes here. Uh the voice is also available. The transcription is also available. The candidate is worth meeting and so on. Okay, you can select on the tag. Everything that has happened with the candidate is available in the timeline. Everything the candidate does comes here. Everything the recruiter does comes here. Notes are the history of all the communication done with the candidate. All the feedback written about the candidate like this. Now what candidate shows in the first step they they definitely show the CV we are not changing that CV will continue to exist whatever uh whatever happens CV to basic filtering.

Sumeet Shisodia: Right.

Saras Satyam: Second one form.

Sumeet Shisodia: Thick.

Saras Satyam: So this is what uh we get to see when the candidate has gone through the certain process. Then we get to see the trip artifact.

00:50:24

Saras Satyam: But let me show you that also. I hope I'm

Sumeet Shisodia: So, so basically basically s this is the flow let's say for example for a particular

Saras Satyam: not

Sumeet Shisodia: job applicant but basically what you are also telling us is that it also then stays in the career passport. database that guy let's say did not get selected in XYZ interview

Saras Satyam: Huh?

Sumeet Shisodia: but today if I feel that he might be fit for some other job thing that's going on then I can you know put him in that pipeline and then he can go in that pipeline

Saras Satyam: Yes. Yes. Correct. Thank

Sumeet Shisodia: to do you want this to be manual like the referring of

Saras Satyam: you.

Sumeet Shisodia: the applicant that part you specifically want to be the decision of the uh whatever whoever hiring manager or of the

Saras Satyam: Whosoever is of whosoever is owning this

Sumeet Shisodia: recruiter whoever is owning this candidate.

Saras Satyam: candidate

Sumeet Shisodia: So you you want that process to be manual or tomorrow that could be AI taking that

00:51:30

Saras Satyam: that process no that will be fully automated and the

Sumeet Shisodia: decision also.

Saras Satyam: way we see that is we will this is a job right we know that this is a AI engineer job okay these are the CV these are the CVs who have reached interviewing stage.

Sumeet Shisodia: Right?

Saras Satyam: Great. I will just like uh go in this view,

Sumeet Shisodia: Right.

Saras Satyam: select everyone and I should be able to move them to some other job. So this entire people who have reached the uh interviewing round of a particular company can be moved to some other pipeline say uh by like uh founding engineer pipeline for some other company and then they can get the trip of those companies. They will reach the applied skill.

Sumeet Shisodia: Understood. Understood.

Saras Satyam: they will reach the prospect stage actually and then in prospect stage I can select

Sumeet Shisodia: Understood. Understood.

Saras Satyam: them and send them a email where I'm asking them to apply.

Sumeet Shisodia: Right.

Saras Satyam: So

Sumeet Shisodia: But but I think but I think for now I think we'll focus on discuss the job

00:52:30

Saras Satyam: application

Sumeet Shisodia: application and uh the tripart

Saras Satyam: exactly focus just quickly

Sumeet Shisodia: yeah

Saras Satyam: call me it is very crystal clear and I want if you can give me a template in which you want the data the number of words you want I can just my claude is trained to answer any question

Sumeet Shisodia: Right, right, right, right, right, right. Absolutely. Yeah, they make sense. I what I'll do right now Saras I think uh first of all I think absolutely clear right the two flows that we have to work on.

Aishvarya D: Yeah. Yeah,

Sumeet Shisodia: Awesome.

Aishvarya D: it is.

Sumeet Shisodia: Cool. So what I'll do Saras right now is just create a quick WhatsApp

Soutik Mukherji: Yes.

Sumeet Shisodia: groups you know it doesn't have to necessarily come through me. we can all talk to each other and uh quickly resolve and

Saras Satyam: Uhuh.

Sumeet Shisodia: uh next thing we'll come up with is uh so generally how we think uh

Saras Satyam: Yes.

Sumeet Shisodia: this should flow is uh we give you a timeline right you know on a particular date uh we will show you some sort of a wireframe right we'll move to UI at last wireframes UX the only focus will be to get the UX side, right?

00:53:54

Saras Satyam: Take it.

Sumeet Shisodia: you know the boxes have to move here and there or the layout has to be different whatever right we can do uh a number of changes there once wireframe is locked right we'll see everything in black and white we'll see higher this makes a lot of sense and then once we lock that is when we'll move to the UI part of the platform right and that is how we will do for every flow

Saras Satyam: uh the only perfect. The only small thought is since we are getting started uh I would recommend that we can first also apart from doing this we also uh freeze on the design system. Uh like when we start doing UI then doing the design system versus doing

Sumeet Shisodia: Yeah.

Saras Satyam: it now. I I would prefer doing it now. Uh because that color combination and other things also has to talk to Hiteshwar who is doing the website. uh it should look inflow.

Sumeet Shisodia: Right.

Saras Satyam: It should not be ideally he

Sumeet Shisodia: Sure.

Saras Satyam: would want to use your

00:54:57

Sumeet Shisodia: Okay. Okay. Cool. I mean,

Saras Satyam: screens.

Sumeet Shisodia: yeah. See how I would recommend tell me if I'm wrong. I would suggest let's once we complete the wireframes to UI largely discuss

Saras Satyam: like I have been thinking and some of the thoughts are here but I'm not yet there I feel I'm not convinced with so hence uh like once you freeze the design system uh it will help us uh stab take a stab at lot of things which will be in sync

Sumeet Shisodia: Yeah. Any any uh particular affiliation towards dark mode?

Saras Satyam: always

Sumeet Shisodia: Because I feel see my thing is that Generally just a

Saras Satyam: aligned.

Sumeet Shisodia: thought.

Saras Satyam: I don't have any preference. Hence, this is the light mode. Uh this is some dark mode.

Sumeet Shisodia: Yeah.

Saras Satyam: This is one mode.

Sumeet Shisodia: What what we'll do what we'll do next discuss let us also come up with some reference right we'll come up with some

Saras Satyam: Huh?

Sumeet Shisodia: references so that we can pick and choose in that meeting only

00:56:21

Saras Satyam: That that works and uh Nishan can also give you some of the references which uh I've shared with him. So that also probably will uh help sense.

Sumeet Shisodia: sure yeah yeah we

Saras Satyam: In fact, there are a lot of modern AI SAS companies. Yeah. 11 Labs. Yeah. Clay. Yeah. Rocks.

Sumeet Shisodia: Great. Sure.

Saras Satyam: You can just see look

Sumeet Shisodia: Sure. Yeah. We look at all of those. Yeah. Yeah.

Saras Satyam: good.

Sumeet Shisodia: Yeah. Can the inspiration can come from anywhere.

Saras Satyam: Correct.

Sumeet Shisodia: No.

Saras Satyam: And and the way I see the entire loop working is trip in very seamless way and then uh he can do his own interview and offer roll out where where the product doesn't do anything. It only sets up the interview. So the our claim is uh from calendar to conversation from conversation to

Sumeet Shisodia: Right. Right. Yeah.

Saras Satyam: calendar

Sumeet Shisodia: Yeah.

00:57:28

Sumeet Shisodia: Yeah. So, we'll take a stab at it. Abar, I think we'll do an internal discussion. We'll come up with a date and uh pay if you are available.

Saras Satyam: what is the timeline I I can expect why I'm asking this is there are lot of things related to product videos or user manuals that we are not doing thinking to have that consistency consistency but we don't like it as much and

Sumeet Shisodia: Thank you.

Saras Satyam: Mike tech co-founder he happens to be from IIT Bombay computer science network hence he's telling

Sumeet Shisodia: Right.

Saras Satyam: yeah we need that professional touch

Sumeet Shisodia: Um I'll give you forics and as far as availability also since they have to you know actually uh work on this I'll take you with a rough timeline today only

Saras Satyam: done done or show me something which I can show and discuss with Rajit so

Sumeet Shisodia: right

Saras Satyam: that you don't go ahead and uh

Sumeet Shisodia: Yeah, for sure.

Saras Satyam: and let's create a quick WhatsApp group a lot of audio notes you can share with me I can share with you so

00:58:57

Sumeet Shisodia: Yes.

Saras Satyam: that we can keep getting fine-tuned and whatever you want it's there

Sumeet Shisodia: Yeah. Yeah. Sure.

Saras Satyam: documented with me you just ask me I will if it is not I will structure it that way and

Sumeet Shisodia: Sure.

Saras Satyam: give

Sumeet Shisodia: Sure.

Saras Satyam: I don't want you to dump it because now creating document is very easy.

Sumeet Shisodia: Sure.

Saras Satyam: So the value of has

Sumeet Shisodia: Right. Absolutely.

Saras Satyam: gone

Sumeet Shisodia: Makes sense. Makes sense. I'll create a WhatsApp group right away. Yeah.

Saras Satyam: document document is what we want to follow uh in phases or in first shot that we can decide.

Sumeet Shisodia: Take

Saras Satyam: Okay. So,

Sumeet Shisodia: care.

Saras Satyam: any other thing?

Aishvarya D: Uh, not really. Not right now.

Soutik Mukherji: We'll ask you in the

Saras Satyam: Hi.

Soutik Mukherji: question.

Aishvarya D: Yeah.

Saras Satyam: Perfect.

Sumeet Shisodia: Take care. Okay. Thank you. Thanks. Thanks for your time.

Soutik Mukherji: Thank you.

Saras Satyam: Okay.

Aishvarya D: Thank you.

Saras Satyam: Bye.

Sumeet Shisodia: Yeah.

Saras Satyam: Bye.
