

CareerPassport for Recruitment Partners

Version A — The Recruitment Operating System

Tone: Premium · confidence-led · system-level · enterprise-grade

Core promise: CareerPassport gives a recruitment business more leverage from the candidates, relationships and judgement it already owns.

Visual theme: A living private talent network gradually becomes a complete operating system: intelligence → processing → agents → collaboration → client → payout.

Motion grammar: Slow, precise and continuous. One evolving object across the whole page rather than unrelated SaaS screenshots.

SECTION 01 — HERO

The New Operating Model

Exact on-page copy

CAREERPASSPORT FOR RECRUITMENT PARTNERS

Build the recruitment business of the AI era.

Your candidates, client relationships and judgement are already the advantage.

CareerPassport turns them into a connected operating system — private talent intelligence, applicant processing, agentic workflows and trusted collaboration.

[Book a Partner Demo]

[Join CareerPassport]

Your database stays private. You decide where you collaborate.

Design cue

Full-viewport opening with significant negative space.

Do not open with a dashboard.

On one side, introduce a contained **private talent network**. Talent nodes, roles and agent actions can exist within it, but initially the network should feel clearly owned by the recruitment partner.

Transition cue

As the visitor starts scrolling, a new role enters the private network.

Relevant candidate nodes respond.

That network becomes the persistent visual object that evolves through the rest of the page.

SECTION 02 — YOU ALREADY OWN THE ADVANTAGE

Exact on-page copy

You already have the hardest part.

Years of candidate conversations.

Client relationships.

Specialist knowledge.

A network your business has spent time and money building.

The problem is that too much of that value sits trapped inside old databases, inboxes, spreadsheets and individual memory.

The next advantage is not collecting more tools.

It is getting more leverage from what you already have.

CareerPassport makes your existing recruitment business searchable, actionable, agentic and easier to scale.

Design cue

Quiet, editorial section.

Visually show fragmented information sources:

ATS

Spreadsheets

Inbox

WhatsApp

Notes

Candidate files

These should feed into one clean CareerPassport intelligence layer.

Transition cue

As the visitor scrolls, the fragmented systems compress.

Their information flows into the same private talent network introduced in the hero.

The emotion should be **simplification and order**, not technological spectacle.

SECTION 03 — THE OPERATING MODEL

Exact on-page copy

One operating model. Four connected layers.

01 — Private Talent Intelligence

Turn the candidate network you already own into a living, queryable business asset.

02 — Applicant Processing System

Move beyond recording recruitment activity. Structure the role, process candidates and keep the work moving.

03 — Agentic Workforce

Let agents support sourcing, outreach, follow-ups, evaluation, communication and coordination — with the level of autonomy you choose.

04 — Trusted Recruitment Network

Work on your own roles, company-posted opportunities or partner mandates with ownership, commercials and payout visibility built into the process.

Design cue

Do **not** use four generic feature cards.

Build one connected system visual.

The recruitment partner sits at the centre.

Around it:

Talent Intelligence

Applicant Processing

Transition cue

Pin the section briefly during scroll.

Reveal one layer at a time.

At the end of the sequence, all four layers should be visible and operating together.

The Talent Intelligence layer should visibly carry a **Private by default** state.

SECTION 04 — PRIVATE TALENT INTELLIGENCE

Exact on-page copy

Your database should work harder than your recruiters have to.

The best candidate for your next role may already be someone your business knows.

CareerPassport helps you find them without depending on perfect tags, Boolean strings or somebody remembering a conversation from eight months ago.

Ask your talent network the way you actually think.

"Show me enterprise sales leaders who have built teams from scratch."

"Find product managers with payments experience who have worked in 0→1 environments."

"Who have we spoken to before who could fit this role now?"

Your database stops being an archive.

It becomes an active business asset.

Private by default. Your uploaded candidate database is not visible to other recruitment partners or companies.

Design cue

Make natural-language search the visual hero.

Large command/search interface.

Behind it is a deep private talent network rather than spreadsheet rows.

Candidate search results should appear as rich professional profiles.

The boundary around the agency's private talent environment must remain visible.

Transition cue

A recruitment query is typed.

Relevant candidates surface from a much larger dormant network.

Only relevant nodes illuminate.

This should communicate intelligence and selectivity rather than "AI searching everything."

SECTION 05 — APPLICANT PROCESSING

Exact on-page copy

FROM SYSTEM OF RECORD TO SYSTEM OF ACTION

Applicant processing, not applicant tracking.

A traditional ATS tells you where an applicant is.

CareerPassport is designed to help move the applicant forward.

Give it the requirement.

Structure the role.

Define the evaluation.

Build the candidate journey.

Start outreach.

Coordinate the process.

Review evidence.

Schedule the right conversations.

Your recruiting system should participate in the work — not just record that somebody did it.

A sleek AI-native **Applicant Processing System** built for recruitment partners, not another heavyweight ATS to administer.

Design cue

Create a simple conceptual contrast.

Traditional ATS

Candidate in column → status → next column → status

versus:

CareerPassport

Requirement → action → candidate journey → evidence → communication → decision → next action

Transition cue

ATS columns visually flatten into a single active process.

Status labels progressively become actions:

Outreach sent

Journey completed

Evidence reviewed

Interview scheduled

The CareerPassport side should feel more alive without looking more complicated.

SECTION 06 — AGENTIC WORKFORCE

Exact on-page copy

Recruiting that keeps moving — without you touching every step.

CareerPassport agents can support the repetitive work around hiring:

Discovery.

Outreach.

Email.

WhatsApp.

Calls.

Follow-ups.

Candidate conversations.

Evaluation.

Scheduling.

Coordination.

Choose where agents can act autonomously and where recruiter approval is required.

Let software handle more of the operational motion.

Keep human time for judgement, relationships, persuasion and closing.

Design cue

No robot illustrations.

No AI characters.

Show agents as invisible execution infrastructure operating around the candidate journey.

For example:

Candidate identified

Email sent

WhatsApp follow-up

Call completed

Conversation summarised

Interview slots requested

Human decisions should have a visually distinct treatment.

Transition cue

Several operational actions progress automatically.

The flow reaches an approval gate.

Everything pauses.

A recruiter approves.

The workflow resumes.

This visually explains configurable autonomy without requiring a long explanation.

SECTION 07 — OWNERSHIP BEFORE COLLABORATION

Exact on-page copy

Your candidates remain yours.

CareerPassport does not turn your private database into a public talent pool.

Your candidate network stays private to your recruitment business.

Other partners and companies do not browse it.

You decide when a candidate or opportunity enters a collaboration.

Private by default. Collaborative by choice.

Because a network only creates value when ownership is respected.

Design cue

Return visually to the boundary surrounding the recruitment partner's private network.

External:

Companies

Other recruitment partners

should clearly remain outside that boundary.

Transition cue

A candidate approaches the network boundary but does not automatically cross it.

Only an explicit recruiter action such as:

Submit candidate

or

Share into collaboration

creates the connection.

SECTION 08 — THREE WAYS TO CREATE OPPORTUNITY

Exact on-page copy

Three ways to create opportunity.

Bring your own role

Run your client mandate privately — and invite selected partners to collaborate when additional reach can accelerate fulfilment.

Work directly on company roles

Discover opportunities posted by companies on the CareerPassport marketplace and express interest in fulfilling them.

Join another partner's mandate

Contribute relevant talent or specialist reach to a role posted by another recruitment partner.

One network.

More ways for the relationships you already have to create value.

Design cue

Create three clearly different sources:

MY CLIENT

COMPANY

PARTNER

Each produces a role.

Do not create a generic marketplace grid with dozens of job cards.

Transition cue

Each route activates independently.

Then all three converge into the same CareerPassport fulfilment workflow.

The message:

Different source. Same trusted infrastructure.

SECTION 09 — FROM LOST OPPORTUNITY TO SHARED VALUE

Exact on-page copy

When fulfilment cannot happen alone, value should not fall to zero.

Sometimes you have the client and mandate, but not the right candidate.

Sometimes you know the candidate, but do not have the right mandate.

In the traditional model, both situations can end with no placement and no revenue.

CareerPassport gives the network another option:

Collaborate. Fulfil faster. Share the economics.

A smaller share of a successful placement can be more valuable than 100% of an opportunity that never gets fulfilled.

The goal is not collaboration for its own sake.

It is better fulfilment for the client and clearer value for every partner who contributes.

Design cue

Make the economics incredibly simple.

Demand without supply → 0

Supply without demand → 0

Then:

Demand + trusted collaboration + supply

↓

Fulfilled

↓

Shared economics

Transition cue

The two zero-value states initially sit separately.

A controlled connection forms.

They collapse into one fulfilment workflow.

Avoid fictional revenue statistics.

SECTION 10 — COMMERCIAL TRUST

Exact on-page copy

Collaboration works better when the commercial truth is visible.

Before the work begins, capture the terms that matter.

As the role progresses, keep the history that proves what happened.

Role owner · Candidate owner · Fee · Commission split · Replacement terms

Submission history · Candidate progress · Invoice · Payout

From first submission to final payout, CareerPassport gives participants a shared record of the collaboration.

Know who owns what.

Know who earns what.

Know where the process stands.

Design cue

This should feel more like **financial/deal infrastructure** than HR software.

Show a clean collaboration record:

Role owner
Candidate owner
Fee
Commission split
Replacement period
Submission date
Candidate status
Invoice
Payout

Transition cue

Follow one collaboration from:

Terms agreed

↓

Candidate submitted

↓

Candidate joins

↓

Invoice issued

↓

Payout complete

Commercial terms remain persistent throughout.

SECTION 11 — A BETTER FACE IN FRONT OF THE CLIENT

Exact on-page copy

Look like a better recruitment partner because you are running a better process.

CareerPassport can become part of the experience you give your client — from structured requirement intake and evaluation design to candidate coordination, interview scheduling and onboarding.

Instead of appearing as somebody forwarding CVs and chasing feedback, your business can run a clear, evidence-led hiring process the client can participate in.

More organised.

More transparent.

More credible.

For a boutique agency or independent headhunter, that can make a small team feel like serious hiring infrastructure.

Design cue

Change perspectives.

Move from the internal recruiter workspace to what the client sees.

Show:

Role requirement

Evaluation criteria

Recommended candidates

Evidence

Interview scheduling

Next actions

Transition cue

The same role visually “turns around.”

One side = recruitment partner operating view.

Other side = client experience.

Same information. Different perspective.

SECTION 12 — EVIDENCE, NOT ANOTHER CV

Exact on-page copy

Give clients more than a CV and a recruiter comment.

CareerPassport is built around richer professional identity and evidence.

Where available, a recommendation can carry the context behind the candidate:

Relevant experience.

Work samples.

Professional evidence.

Candidate journeys.

Structured evaluation.

Move the conversation from:

“Trust my recommendation.”

To:

“Here is why this person deserves your attention.”

That makes the recruiter's judgement easier to understand — and easier for the client to act on.

Design cue

Show the contrast visually.

OLD

Candidate_Final_V3.pdf

Short recruiter note.

versus:

CAREERPASSPORT

Candidate identity

Relevant experience

Evidence

Journey

Evaluation context

Recommendation rationale

Transition cue

The CV visually unfolds into richer evidence.

Do not communicate that CareerPassport itself has declared the candidate “verified.”

The product presents evidence.

The hiring company makes the judgement.

SECTION 13 — BUSINESS OUTCOMES

Exact on-page copy

More leverage. Less operational weight.

Activate more of your database

Rediscover candidates and relationships your business has already invested in.

Manage more activity per recruiter

Use agents to reduce repetitive coordination and execution work.

Fulfil more opportunities

Expand beyond the roles and candidates one recruiter or one firm can fulfil alone.

Collaborate without surrendering ownership

Keep private talent private and make intentional collaboration easier to govern.

Improve the client experience

Run a more structured, evidence-led and responsive process in front of the client.

Operate with fewer disconnected tools

Bring talent intelligence, applicant processing, agents and collaboration into one operating model.

Design cue

Avoid generic six-card SaaS layouts.

Bring the complete CareerPassport operating-system visual back to the centre.

Each outcome can point to the part of the system that enables it.

SECTION 14 — FINAL CTA

THE NEXT RECRUITMENT BUSINESS

The next generation of recruitment firms will not be defined by how many tools they use.

They will know how to activate their private networks.

They will use agents without losing human judgement.

They will collaborate without losing control.

And they will bring evidence into a market that increasingly demands trust.

Build yours on CareerPassport.

[**Book a Partner Demo**]

[**Join CareerPassport**]

Closing signature

Your candidates.

Your relationships.

Your business.

More leverage from all three.

Design cue

Return to the network from the opening.

It is now the complete CareerPassport operating model:

private candidates, roles, agent activity, collaborators, client and commercial flow.

Then remove all visual complexity.

Finish with only:

CareerPassport

Headline.

CTA.
